#### A. PERSONAL STATEMENT

My research examines the psychological and neural processes involved in self-regulation and social development. All of my work employs a transdisciplinary developmental cognitive neuroscience approach to examine the relation between brain development and changes in psychological processes from birth to adulthood, with a special focus on adolescence. Using longitudinal neuroimaging techniques, my lab examines developmental trajectories over time in the domains of self-regulation, planning, risk taking, social learning, social rejection and prosocial behavior, as well as individual differences between individuals. One of my special interests involves enrichment of cognitive and social experiences of children and adolescents using longitudinal, training and intervention designs.

## B. CONTRIBUTIONS TO SCIENCE

Besides our mission to do innovative and excellent scientific research, we invest in the contribution and translation of scientific findings to society.

My lab has a strong focus on *Open science*, including citizen science, co-creation with societal partners, pre-registration, data sharing, facilitate full open access to publications, collaboration and interdisciplinary approaches and science outreach.

## WOMEN IN SCIENCE

- 2019      Invited Presentation at 17<sup>th</sup> Gender Summit Europe, organized by Ministry of Culture, Education and Science, as scientific council member of the European Research Council.
- 2015-     Prof. Naomi Ellemers, Prof. Judi Mesman, Prof. Ineke Sluiter and I initiated a new network to give attention to the low number of female professor in the Netherlands, **Athena's Angels: 4 women in science**. The goal of this initiative is to provide background knowledge on unequal opportunities for women and to stimulate activities to improve career opportunities for women in science. The website: [www.athenasangels.nl](http://www.athenasangels.nl) provides scientific information about implicit bias, as well as personal experiences and recommendations.
- 2016     Athena's Angels redesigned the Senate Chamber of Leiden University for one month with portraits of only women. The traditional portraits of (all male and one female) professors were covered with portraits of currently active female professors at Leiden University. The initiative was a starting point of presenting women at more prominent places in the University. They fulfil an important role in setting an example for students and young faculty.
